

5 Ways to Lower Your Irrigation Water Bill

Switch Nozzles

to Toro's new Precision Series Nozzles, which are 40% more efficient than traditional nozzles.

Install a RainSensor

or Irritrol's new Climate Logic Weather System to automatically reduce wasted water when not needed.

Conduct an Audit

of the system to identify sprinkler spacing errors, broken sprinklers, leaks and sprinkler adjustment problems.

Switch Shrub and Flower Bed Sprinklers

to drip irrigation tube, which is approximately 25 - 30% more efficient than overhead sprinklers.

Change Spray Heads

to models that have built-in pressure regulation and flow shutoff if the nozzle is broken off. Broken spray heads can waste up to **50 gallons a minute** in systems operating above 50 psi.
